WEEKLY TAPE SHEET · US EQUITIES

The Capex Tax

WEEK ENDING FRI 24 JUL 2026
COMPILED SAT 25 JUL · 50 SOURCES

Three companies beat earnings this week and were sold anyway. Alphabet, Intel and Texas Instruments each cleared the bar on revenue and profit, then raised what they intend to spend — and the market marked all three down. The buyers went where the spending lands: servers, memory, power. The sellers went where the spending comes from.

S&P 500 7,411.98 +0.05% Fri · −0.6% wk	NASDAQ COMP 24,975.82 −0.64% Fri · −2.0% wk

US 10-YEAR 4.67% high since Jan 2025	BITCOIN ~$63.9k +9% in July

Top 10 movers, up and down

bars share one scale, 0–90%

▲ Ten biggest advances

20–24 JUL

01 **UTZ** Utz Brands **+89.2%**
7D +89.2% · 30D ≈ +86%
TUE 21 · Taken private by Intersnack Group in a $2.9bn deal. The week's only true one-off — a closed-end event, not a trend.

02 **SMCI** Super Micro Computer **+25.0%**
7D ≈ +28% · 30D ≈ −1%
TUE–WED · Over $60bn of new Q4 orders, record backlog, and gross-margin guidance lifted from 8.2–8.4% to 15–17%. Plans an AI data centre with SpaceX.

03 **ACHR** Archer Aviation **+22.0%**
7D +22.0% · 30D −13.1%
MON 20 · Defence-tech partnership; the single largest one-day move of Monday's session.

04 **NBIS** Nebius Group **+18.9%**
7D ≈ +19% · 30D −24%
TUE 21 · Nvidia disclosed a 9.3% stake in the neocloud — ~22.3m shares, tracing to a $2bn March investment. Analyst targets followed.

05 **MU** Micron Technology **+12.0%**
7D ≈ +4% · 30D n/a
TUE 21 · Memory melt-up: WDC and STX each rose about the same, the DRAM ETF +11%. Round-tripped by Friday — see below.

06 **COIN** Coinbase **+9.6%**
7D ≈ +10% · 30D −32%
TUE 21 · Bitcoin hit its highest since 16 June on CLARITY Act optimism and a fifth straight day of spot-ETF inflows.

07 **WULF** TeraWulf **+8.0%**
7D +8.0% · 30D ≈ −23%
TUE 21 · Carried up in the same crypto-equity bid as COIN and HOOD.

08 **NOW** ServiceNow **+7.3%**
7D +7.3% · 30D n/a
THU 23 · EPS $0.90 vs $0.85–0.86 est, subscription revenue +23%, FY guidance raised, AI ACV past $1bn. A rare beat that was actually paid for.

09 **HOOD** Robinhood **+7.1%**
7D +7.1% · 30D +36.9%
TUE 21 · Crypto-linked bid; closed at $106.36.

10 **HAS** Hasbro **+7.0%**
7D +7.0% · 30D −5.7%
TUE 21 · Q2 beat on both lines, FY adjusted EBITDA guidance raised.

JUST MISSED
DPZ +7.0% (Mon, rose through an EPS miss) · EQT +6.6% (volume guidance raised) · HON +5% (FY outlook up) · CME +5% (best-ever first half) · AAPL +3.5% (Fri) · CRM +4.1%, IBM +3.6% (Fri, Dow leaders)

▼ Ten biggest declines

20–24 JUL

01 **LESL** Leslie's **−47.0%**
7D ≈ −60% · 30D ≈ −60%
WED 22 · Weighing Chapter 11. About $757m of debt against $61m FY25 adjusted EBITDA — roughly 12.5× leverage. Down over 99% since its 2020 IPO.

02 **ACI** Albertsons **−22.0%**
7D −22.0% · 30D −24.2%
THU 23 · EPS $0.42 vs $0.54 est and FY26 guidance cut to $1.75–1.85 from $2.22–2.32. Identical sales flipped to a decline. Losing low-income shoppers to Walmart, Amazon and Aldi.

03 **PEGA** Pegasystems **−16.7%**
7D −15.2% · 30D −12%
WED 22 · Q2 miss, slower contract growth, and a warning that AI-driven spending delays are hitting demand. The clearest "AI eats software" print of the week.

04 **ROL** Rollins **−14.7%**
7D −14.7% · 30D n/a
WED 22 · EPS $0.32 on $1.08bn, both light, and the FY organic growth outlook cut on weak residential demand — despite a 99th straight quarter of revenue growth.

05 **TSLA** Tesla **−14.5%**
7D −19% · 30D ≈ −8.5%
THU 23 · Worst earnings-reaction day on record. Record $28.2bn revenue and 480,126 deliveries, but operating income fell 57%, margin hit 1.4%, FCF turned negative and capex heads past $25bn. Down ~19% on the week.

06 **SNDK** SanDisk **−11.0%**
7D −11.0% · 30D −24.0%
FRI 24 · Memory supply-glut fears as Samsung and SK Hynix add capacity. Still up ~526% YTD — this reads as profit-taking, not a broken thesis.

07 **MOH** Molina Healthcare **−9.2%**
7D −9.7% · 30D n/a
THU 23 · Beat on EPS at $1.51 but sold on falling membership and lower premium revenue. Health care is the only S&P sector shrinking this quarter.

08 **WDC** Western Digital **−9.0%**
7D −9.0% · 30D ≈ −33.6%
FRI 24 · Same memory unwind; SK Hynix and Micron fell 6–8% alongside. Both ends of the round trip inside four sessions.

09 **INTC** Intel **−8.0%**
7D −8.0% · 30D n/a
FRI 24 · Revenue $16.1bn (+25%, fastest in 15 years), EPS $0.42 versus $0.21 est, data-centre and AI +59%. Popped 13% after hours, then gave it all back once capex above $20bn landed.

10 **GOOGL** Alphabet **−7.1%**
7D −7.1% · 30D ≈ −8.3%
THU 23 · Worst earnings reaction since Feb 2025. Revenue $119.8bn (+24%), Cloud +82%, 12th straight double-digit quarter — erased by FY capex guided to $195–205bn and a warning that 2027 goes higher still.

JUST MISSED
GEV −7% (beat and raised, sold anyway) · RHI −6% · TXN −5.3% (double beat, priced for more) · SPCX −5.3% to a record low · CAVA −5% · AMZN −4%, MSFT −2% (Thu)

One name, both lists

Micron and Western Digital appear on opposite boards in the same week. Both rose about 12% on Tuesday as memory pricing ran, then fell 6–9% on Friday when Samsung and SK Hynix capacity additions revived glut fears. That round trip — not the Tesla headline — is the week's cleanest read on how thin the AI-hardware bid actually is: it is a positioning trade, and it unwinds in a session.

Backdrop

what set the tone

THE CAPEX VERDICT
Alphabet lifted FY26 capex to **$195–205bn** (Q2 alone $44.9bn, +101% y/y). Intel went past **$20bn**. Tesla past **$25bn**. All three beat; all three fell. Hyperscaler capex is tracking above **$500bn** for 2026.

OIL AND THE GULF
Brent settled above **$100** Thursday, +7% to $100.69 and the highest since 22 May, after Houthi drone and missile strikes on two Saudi tankers. It slid to about **$95** Friday on US–Iran talk hopes. Crude is up ~30% this month.

RATES ARE THE OTHER TAX
The 10-year sits at **4.67%**, touching ~4.70% — the highest since January 2025. Funds rate **3.50–3.75%**, with 2026 inflation projections revised up to 3.6% and Waller flagging risk tilted toward inflation.

EARNINGS, FLATTERED
Q2 blended S&P growth jumped to **37.9%** from 24.8% a week earlier — but Alphabet's GAAP figure carried a **$98bn** one-off gain. Strip it out and the number is **25.9%**. Ten of eleven sectors are growing; health care is the exception.

UNDER THE SURFACE
Tech fell **2.37%** Friday while real estate, financials, materials, health care and staples rose — 17 S&P names hit 52-week highs, led by JPMorgan. Communication services and consumer discretionary each shed roughly 6% on the week.

NEXT WEEK DECIDES IT
FOMC 28–29 Jul, no dot plot, Chair Warsh at 2:30pm ET — a hold is expected but markets price roughly **35%** odds of a hike. Then Microsoft, Meta, Amazon, Apple and Qualcomm all report into the same capex question.

Retail & social layer

REDDIT — HELD SEPARATE

This block is deliberately walled off from everything above. It is **chatter volume and vendor-computed sentiment**, not price or fundamental data, and it is not a source for any figure on the boards. Mention counts come from third-party scrapers polling r/wallstreetbets on short intervals, so rankings shift intraday and no two vendors agree exactly. Read it as a crowding indicator only.

MOST DISCUSSED
INTC
The week's runaway topic. Mention volume spiked **+591% to +751%** in 24 hours depending on the snapshot, on the Q2 beat and the capex reversal.
volume spike · direction mixed

MOST BEARISH
TSLA
Sentiment tracked **24–36 of 100** after the print, with the 30-day score around 28 — firmly bearish. Cited: deliveries, margin collapse, executive departures, BYD charging.
sentiment 28/100 · bearish

BULLISH CLUSTER
GOOG · NVDA · AMD
Flagged bullish with strong AI scores even as GOOGL fell 7.1% on the tape — a clean case of the crowd and the price disagreeing.
bullish · diverges from price

ALSO TRENDING
IBM · NOW
Rounded out the top five most-talked-about names of 20–24 Jul across r/wallstreetbets and X, both on earnings.
earnings-driven

Worth noting: the four names retail talked about most — INTC, TSLA, GOOGL, IBM — include three of the ten biggest decliners. Attention concentrated almost entirely on what was falling, and none of the week's actual top advances (UTZ, SMCI, ACHR, NBIS) registered in the top five by mention volume.

How to read this. Each row carries a **7 day** and **30 day** price trail; those two figures are merged and averaged from multiple vendors, and the marker beside them states which — see the source log below before relying on them. The headline percentage is the **single-session reaction** to the catalyst named in each row, not full week-over-week returns, because that is how the underlying coverage reports them; the date chip on each row tells you which session. Where a figure was quoted intraday, after hours and at the close, the close is used and the others noted. A few percentages differ by one to two points between outlets covering the same move (SMCI was reported at +13%, +15%, +18% and +25% across venues and sessions) — the most widely corroborated figure is shown. Bars are scaled to a shared 0–90% range across both boards, so the two sides are directly comparable. Green and red never carry meaning alone: every value keeps its sign and every row sits in a labelled board. Compiled Saturday 25 July 2026 from the sources below; nothing here is investment advice.

Source log — how the 7 day and 30 day figures were built

These two columns are merged, averaged data and are not exchange-verified. No single price feed was available when this sheet was compiled, so the figures were assembled from multiple published vendor snapshots. Where two or more sources reported the same window and disagreed, the values were **averaged** and the result marked accordingly. Treat them as indicative of direction and rough magnitude, not as exact returns. Every figure on the mover boards above — the headline single-session move — is separately sourced and is not affected by this.

- **Averaged.** Two or more sources for the same window, mean taken. Spreads were sometimes wide: TSLA 30 day came from −10.97% and −6.0%; GOOGL from −5.67% and −11%; WDC from −36% and −31.14%; HAS from −6.7% and −4.79%.
- **Single source**, or derived arithmetically from two reported closing prices. Not cross-checked. Values shown with ≈ are derived rather than reported directly.
- **Not sourced.** No figure for that window survived checking, so the cell reads n/a and shows a bare axis rather than an estimated bar. This applies to the 30 day column for MU, NOW, ROL, MOH and INTC.

Known limitations. As-of dates are not uniform — vendor snapshots range from roughly 14 to 24 July, so a "30 day" window is not the same 30 days for every row. Several sources were undated, and a few were plainly stale relative to the week's events: the HOOD 30 day figure covers 5 June to 7 July and predates this week entirely, and the SMCI 30 day average combines a mid-July snapshot with a post-earnings derivation, which is why it nets to roughly flat despite a 25% move on the week. **The mini charts are net-change slopes, not price paths.** Each panel runs flat at the period start and ends at the reported return, so its gradient shows direction and size of the net move — left panel the 7 day window, right panel the 30 day. They share one ±40% vertical scale, so gradients are comparable across every row and both windows; four cells run past it — UTZ on both windows and LESL on both — and carry an arrowhead to say so, with the true figure always printed beside the panel. The straight line is deliberate: no daily closes were reachable, so the shape between the two endpoints is unknown and is not drawn. A name can end a window flat having moved sharply in between — MU round-tripped a 12% gain inside this very week — and that detour is invisible here by design. Percentages are price returns and exclude dividends. LESL is a distressed situation where the quoted price moved faster than the sources tracking it.
