

WEEK ENDING FRI 24 JUL 2026

COMPILED SAT 25 JUL • 50 SOURCES

Three companies beat earnings this week and were sold anyway. Alphabet, Intel and Texas Instruments each cleared the bar on revenue and profit, then raised what they intend to spend — and the market marked all three down. The buyers went where the spending lands: servers, memory, power. The sellers went where the spending comes from.

FRI 24

Revenue \$16.1bn (+25%, fastest in 15 years), EPS \$0.42 versus \$0.21 est, data-centre and AI +59%. Popped 13% after hours, then gave it all back once capex above \$20bn landed.

10

GOOGL

Alphabet

-7.1%

7D

-7.1%

30D

≈ -8.3%

THU 23

Worst earnings reaction since Feb 2025. Revenue \$119.8bn (+24%), Cloud +82%, 12th straight double-digit quarter — erased by FY capex guided to \$195-205bn and a warning that 2027 goes higher still.

JUST MISSED

GEV -7% (beat and raised, sold anyway) · RHI -6% · TXN -5.3% (double beat, priced for more) · SPCX -5.3% to a record low · CAVA -5% · AMZN -4%, MSFT -2% (Thu)

One name, both lists

Micron and Western Digital appear on opposite boards in the same week. Both rose about 12% on Tuesday as memory pricing ran, then fell 6-9% on Friday when Samsung and SK Hynix capacity additions revived glut fears. That round trip — not the Tesla headline — is the week's cleanest read on how thin the AI-hardware bid actually is: it is a positioning trade, and it unwinds in a session.

Backdrop

what set the tone

THE CAPEX VERDICT

Alphabet lifted FY26 capex to **\$195-205bn** (Q2 alone \$44.9bn, +101% y/y). Intel went past **\$20bn**. Tesla past **\$25bn**. All three beat; all three fell. Hyperscaler capex is tracking above **\$500bn** for 2026.

OIL AND THE GULF

Brent settled above **\$100** Thursday, +7% to \$100.69 and the highest since 22 May, after Houthi drone and missile strikes on two Saudi tankers. It slid to about **\$95** Friday on US-Iran talk hopes. Crude is up ~30% this month.

RATES ARE THE OTHER TAX

The 10-year sits at **4.67%**, touching ~4.70% — the highest since January 2025. Funds rate **3.50-3.75%**, with 2026 inflation projections revised up to 3.6% and Waller flagging risk tilted toward inflation.

EARNINGS, FLATTERED

Q2 blended S&P growth jumped to **37.9%** from 24.8% a week earlier — but Alphabet's GAAP figure carried a **\$98bn** one-off gain. Strip it out and the number is **25.9%**. Ten of eleven sectors are growing; health care is the exception.

UNDER THE SURFACE

Tech fell **2.37%** Friday while real estate, financials, materials, health care and staples rose — 17 S&P names hit 52-week highs, led by JPMorgan. Communication services and consumer discretionary each shed roughly 6% on the week.

NEXT WEEK DECIDES IT

FOMC 28-29 Jul, no dot plot, Chair Warsh at 2:30pm ET — a hold is expected but markets price roughly **35%** odds of a hike. Then Microsoft, Meta, Amazon, Apple and Qualcomm all report into the same capex question.

Retail & social layer

REDDIT — HELD SEPARATE

This block is deliberately walled off from everything above. It is **chatter volume** and **vendor-computed sentiment**, not price or fundamental data, and it is not a source for any figure on the boards. Mention counts come from third-party scrapers polling r/wallstreetbets on short intervals, so rankings shift intraday and no two vendors agree exactly. Read it as a crowding indicator only.

MOST DISCUSSED

INTC

The week's runaway topic. Mention volume spiked **+591% to +751%** in 24 hours depending on the snapshot, on the Q2 beat and the capex reversal.
volume spike · direction mixed

MOST BEARISH

TSLA

Sentiment tracked **24-36 of 100** after the print, with the 30-day score around 28 — firmly bearish. Cited: deliveries, margin collapse, executive departures, BYD charging.
sentiment 28/100 · bearish

BULLISH CLUSTER

sentiment 28/100 • bearish		
BULLISH CLUSTER		
GOOG • NVDA • AMD		
Flagged bullish with strong AI scores even as GOOGL fell 7.1% on the tape — a clean case of the crowd and the price disagreeing.		
bullish • diverges from price		
ALSO TRENDING		
IBM • NOW		
Rounded out the top five most-talked-about names of 20–24 Jul across r/wallstreetbets and X, both on earnings.		
earnings-driven		
Worth noting: the four names retail talked about most — INTC, TSLA, GOOGL, IBM — include three of the ten biggest declines. Attention concentrated almost entirely on what was falling, and none of the week's actual top advances (UTZ, SMCI, ACHR, NBIS) registered in the top five by mention volume.		

How to read this. Each row carries a **7 day** and **30 day** price trail; those two figures are merged and averaged from multiple vendors, and the marker beside them states which — see the source log below before relying on them. The headline percentage is the **single-session reaction** to the catalyst named in each row, not full week-over-week returns, because that is how the underlying coverage reports them; the date chip on each row tells you which session. Where a figure was quoted intraday, after hours and at the close, the close is used and the others noted. A few percentages differ by one to two points between outlets covering the same move (SMCI was reported at +13%, +15%, +18% and +25% across venues and sessions) — the most widely corroborated figure is shown. Bars are scaled to a shared 0–90% range across both boards, so the two sides are directly comparable. Green and red never carry meaning alone: every value keeps its sign and every row sits in a labelled board. Compiled Saturday 25 July 2026 from the sources below; nothing here is investment advice.

Source log — how the 7 day and 30 day figures were built
These two columns are merged, averaged data and are not exchange-verified. No single price feed was available when this sheet was compiled, so the figures were assembled from multiple published vendor snapshots. Where two or more sources reported the same window and disagreed, the values were averaged and the result marked accordingly. Treat them as indicative of direction and rough magnitude, not as exact returns. Every figure on the mover boards above — the headline single-session move — is separately sourced and is not affected by this.
● Averaged. Two or more sources for the same window, mean taken. Spreads were sometimes wide: TSLA 30 day came from -10.97% and -6.0%; GOOGL from -5.67% and -11%; WDC from -36% and -31.14%; HAS from -6.7% and -4.79%.
⊖ Single source, or derived arithmetically from two reported closing prices. Not cross-checked. Values shown with ≈ are derived rather than reported directly.
○ Not sourced. No figure for that window survived checking, so the cell is left empty rather than estimated. This applies to the 30 day column for MU, NOW, ROL, MOH and INTC.
Known limitations. As-of dates are not uniform — vendor snapshots range from roughly 14 to 24 July, so a “30 day” window is not the same 30 days for every row. Several sources were undated, and a few were plainly stale relative to the week's events: the HOOD 30 day figure covers 5 June to 7 July and predates this week entirely, and the SMCI 30 day average combines a mid-July snapshot with a post-earnings derivation, which is why it nets to roughly flat despite a 25% move on the week. The mini charts are zero-centred and share one ±90% scale, so a bar's length is comparable across every row and both windows; they plot the two figures themselves, not a daily price path — no intraday or daily closes were available to draw a real trend line from. Percentages are price returns and exclude dividends. LESL is a distressed situation where the quoted price moved faster than the sources tracking it.
